Message to the Shareholders

Dear Shareholders:

Year 2001 is a very important year of BenQ's development.

With the dramatic shift of the electric industry, for instance the recession of the last three quarters and the events such as laid off, the control of inventory and the bad earning performance of the enterprise were happened all around the world. A lot of the enterprises in Taiwan also lowered their financial forecasts. Furthermore, with the influence of the 911 event in U.S., the global economic became more and more conservative.

Fortunately, BenQ's strategy position and the global arrangement led BenQ to a harvesting period. In this recession, the consolidated sales revenue had a growth rate, 18% and attended to NT\$ 7.37 billion. The gross growth rate also was increased from 13% to 15%. Then, the operating net income also achieved NT\$ 3.2 billion. This figure showed a 158% growth YoY. After BenQ booked the loss from AUO, the net income declined 34% YoY. The performance of the net income after booking the loss of AUO was NT\$ 3 billion. In addition, the sales was boosted every year and the core business showed a rising profit ability. This development direction proved the right strategy decision of past years and the sales growth momentum. Furthermore, this development direction also entitled BenQ the leading position of the development potential in the customer electric industry.

BenQ always focus on the research, design and the upgrade of the product quality. Therefore, with the balance consideration of strategy and earning, BenQ spent seven years developing the communication products. Last year, the shipment of mobile phone bloomed and become the leading enterprise in Taiwan. The first quarter mobile phone delivery was 1.5 million units every month that was the record high of BenQ history. The excellent performance was depended on the diligence of the manager team and the employees, and the depth of the research teams. This performance also showed a great research, design, flexible, reactive and large capacity production ability.

One of BenQ's important strategies is the vertical management of the suppliers. Last year, the invested company of BenQ, Acer Display Technology, Inc., was merged with UNIPAC to be AUO. The new company, AUO, is the largest TFT-LCD manufacture in Taiwan and the third and fabulous one in the world. Therefore, with the strength of full size production line, the products can be used widely. Surely, BenQ can use this TFT-LCD technology strength to be the main direction, then the new business can be expand dramatically.

Name brand is the largest beneficence of the long-term enterprise development. With the broad technology development and diversified products in all segmentations, BenQ successfully released the new brand name "BenQ"-Bring Enjoy and Quality to Life. The goal is to combine the technology and enjoyment and then bring a flash feeling to the customers. Furthermore, BenQ will bring the higher level technology products into customer's life. Recently, the study in the market, the extension in the distribution, the back support and the maintenances in the after service lead a lot of BenQ's products to dominate the industry. The increasing of sales revenue in Taiwan, Mainland, Asia and Latin America confident us to public the brand name "BenQ". In the future, BenQ will use the global purchase and interactive study in the organization and centralize all the source to focus on the research to upgrade the quality of products and also develop the products with crossing area technology to upgrade the competition and then to be a global brand name.

About the forecast of the development in year 2002, the LCD display products and optomics storage products are still hot in the market. Furthermore, with the increasing demand of the replacement mobile phone, a lot of BenQ's products are the biggest players in the fast development market and the sales revenue continue to increase. With the inside portfolio source efficient application and the excellent cost control, BenQ can upgrade competition. The manage team and all the employees has positive attitude to the forecast of year 2002. BenQ also hopes that after the hard work and a series of challenge for a long time, BenQ can thank the shareholders' long-term loyalty and consideration by contributing more excellent performance.

Best regards.

(3) Market Forecast

A. Multimedia Display

According to INSTITUTE OF INFORMATION INDUSTRY, Taiwan produced 46.2 million pieces of CRT monitors in 2001, while the worldwide output of CRT monitors reached 88 million pieces. Taiwan-made CRT monitors took up 53% of global market share. The same figures in 2002 will hit 44.5 million pieces (Taiwan-made), 87 million pieces (worldwide), and 51% (market share) respectively.

The worldwide market for LCD monitors will increase from 15.0 million pieces in 2001 to 26.0 million pieces in 2002. Taiwan-made LCD monitor took up and will take up more than 60% of global market share. Although the market share of Taiwan-made CRT monitor decline in year 2001, Taiwan's display industry will continue to dominate the worldwide market for the coming years because of the dominate market share and leading position in LCD monitor.

The global production quantity of PDP display attended 0.33 million units in 2001, and the forecast of the global production of PDP display will increase to 0.6 million units in 2002. With the fashion of slim TV set and the strong support from PDP panel suppliers, the global market of PDP display may have a positive growth in 2002. The production quantity of TFT TV set increased to 0.68 million units in 2001. The Forecast of the global production of TFT TV set in 2002 may attend 1.5 million units. Sharp dominates the TFT TV set market but the increasing demand and price show a great potential for the new entrants.

B. Storage Devices

Taiwan's shipments of CD-ROM drives reached 42 million pieces in 2001 with a worldwide market share of roughly 52%. The main products in Taiwan are 52x CD-ROM drives. As market demand for CD-RW and DVD-ROM increase, CD-ROM shipments will gradually decrease from 2002.

The market of DVD-ROM drives was less than expected because Japanese manufacturers tightly controlled the release of DVD patents and key components. Taiwan's shipment of DVD-ROM drives in 2001 was about 5.9 million pieces. In year 2002, shipment is forecasted to be increased to 9.6 million pieces.

Market demand for CD-RW drives is very strong and lots of PC vendors are bounding CD-RW drives with their PCs. Therefore, worldwide CD-RW shipment will increase obviously. It is forecasted that Taiwan's shipment will reach 18.3 million pieces in 2002 from 11.3 million pieces in 2001.

C. Scanners

The market of scanner did not increase. With the decreasing of suppliers and brand name promotion, BENQ becomes the important partner of the scanner-leading brand and also increase the market share around the world. With the OEM orders, the color laser printer may have excellent performance.

D. Mobile Phones

According to the various market dates, the demand of Mobile Phones shows a positive growth. Forecasting 2002, BENQ will deliver 11 million sets and about the 2.5% market share of the global market. The ranking of BENQ's market share is NO. 10 around the world.

E. Network Product

WLAN market forecast: the shipment will increase but the production amount may decline slightly about 20% to 30%.

For the Wireless Internet card, IDC estimated the global delivery may grow about 48.3% to 8.53 million pieces and the CAGR is 42.5% from 2000 to 2005. The production amount may increase 22.8 % to US\$ 950 million and the CAGR is 22.5%. On the other hand, the Forecast decline rate of the price was 20% even though the market forecast is over 30% in 2002, the decline of price can increase the demand; therefore, the forecast of shipment is conservative. IEK forecasts 10.47 million pieces and notes that the delivery of Taiwan-made products may increase about 86% to 6.85 million in 2002 from 3.68 million pieces in 2001. The market share will attend 65% around the world.

For the AP/Bridge, IDC announced the world production quantity and amount will increase about 43.5% and 29.1 %. From 2000 to 2005 the CAGR will be 33.5% and 25.7% because of the slight declining forecast of the price. According to MIC, although the AP production quantity in Taiwan increased 60% in 2001, the growth rate production amount is only 6%. Therefore, the increasing delivery of Bridge and Router in 2002 will lead the production amount of AP to increase about 10% to 20%.

Independent Auditors' Report

The Board of Directors
Benq Corporation:

We have audited the non-consolidated balance sheets of Benq Corporation as of December 31, 1999, 2000 and 2001, and the related non-consolidated statements of income, changes in stockholders' equity and cash flows for the years then ended. These non-consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these non-consolidated financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the Republic of China. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the non-consolidated financial statements referred to above present fairly, in all material respects, the financial position of Benq Corporation as of December 31, 1999, 2000 and 2001, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the Republic of China.

The accompanying non-consolidated financial statements as of and for the year ended December 31, 2001 have been translated into United States dollars solely for the convenience of the readers. We have audited the translation and, in our opinion, the non-consolidated financial statements expressed in New Taiwan dollars have been translated into United States dollars on the basis set forth in note 2 (b) of the notes to the non-consolidated financial statements.

Taipei, Taiwan (the Republic of China)

BENQ CORPORATION

Notes to Non-Consolidated Financial Statements

December 31, 1999, 2000 and 2001

**(all amounts expressed in thousands of New Taiwan dollars and US dollars
except per share information or unless otherwise specified)**

(1) Organization and Principal Activities

(Benq Corporation) (the "Company"), formerly (Acer Communications & Multimedia Inc.), was incorporated on April 21, 1984 as a company limited by shares under the laws of the Republic of China ("ROC"). The Company is engaged in the manufacture and sale of computer peripheral equipment and communication products, such as CRT monitors, CD ROM drives, projectors, scanners, LCD monitors and mobile phones.

(2) Summary of Significant Accounting Policies

The Company Prepares its non-consolidated financial statements are prepared in accordance with accounting principles generally accepted in the ROC. These non-consolidated financial statements are not intended to present the non-consolidated financial position of the Company and the related non-consolidated results of operations and cash flows with accounting principles and practices generally accepted in countries and jurisdictions other than the ROC. The financial statements of the Company's subsidiaries are not consolidated in the accompanying non-consolidated financial statements. The investments in these subsidiaries reflected in these non-consolidated financial and translation statements are accounted for using the equity method as described in point (g) to this note. The significant accounting policies adopted in preparing the non-consolidated financial statements are summarized below:

(a) Foreign currency transactions

The Company's functional currency is the New Taiwan dollar. Foreign currency transactions are recorded at the exchange rates prevailing on the transaction dates. Monetary assets and liabilities denominated in foreign currencies are translated into New Taiwan dollars at the unrealized exchange rates prevailing on the balance sheet dates. The resulting exchange gains or losses are reflected in the accompanying non-consolidated statements of income.

For investments in foreign subsidiaries and investees, which are accounted for by the equity method, the differences resulting from translating foreign financial statements from their functional currency to reporting dollars are reported as a translation adjustment, a separate component of stockholders' equity.

(b) Translation on New Taiwan dollar amounts into United States dollar amounts

The non-consolidated financial statements are stated in New Taiwan dollars. Translations of New Taiwan dollar amounts into US dollar amounts for 2001 are included in the non-consolidated financial statements solely for the convenience of the reader, using the noon buying rate of the Federal Reserve Bank in New York on December 31, 2001 of NT\$35.00 to US\$1. The convenience translations should not be construed as representations that the New Taiwan dollar amounts have been, could have been, or could in the future be, converted into US dollars at this or any other rate of exchange.

(c) Cash equivalents

Cash equivalents represent all highly liquid debt instruments, such as commercial paper and redeemable bonds purchased with a maturity of three months or less, and other highly liquid investments with insignificant interest rate risks.

(d) Short-term investments

Short-term investments consist primarily of marketable securities, such as publicly listed stock, and open-ended mutual funds and bonds, and are originally stated at acquisition cost. Short-term investments are valued at the lower of cost (weighted-average method) or market value. Valuation losses are recorded as non-operating expenses in the accompanying non-consolidated statements of income. The market value used for publicly listed stock is the average closing price of the last month of the period. The market value used for open-ended mutual funds is the fund's net asset value per unit on the balance sheet date.

(e) Allowance for doubtful accounts

Allowance for doubtful accounts is provided based on the aging, credit, quality analysis and the collectibility of notes and accounts receivable.

(f) Inventories

Inventories are stated at the lower of (weighted-average cost) or market value. Market value represents net realizable value or replacement cost.

(g) Long-term equity investments

Long-term equity investments in subsidiaries where the Company owns greater than 50% of the voting shares are accounted for by the equity method. Long-term equity investments are also accounted for by the equity method where the Company, directly or indirectly, owns 20% to 50% of the voting shares or less than 20% of the investee's voting shares but is able to exercise significant influence over the investee's operations and financial policies. All other long-term equity investments are accounted for by either the lower-of-cost-or-market method or cost method. For long-term equity investments accounted for under the lower-of-cost-or-market method related to investees that are publicly listed companies, unrealized losses resulting from declines in the market value below cost are recorded as a separate component of stockholders' equity. For long-term equity investments in non-listed companies accounted for under the cost method, investments are stated at original cost. A write-down of the investment balance to earnings is taken only if it is determined that there is a permanent decline in the investment's value. Stock dividends do not result in the recognition of investment income.

For long-term equity investments accounted for by the equity method where the investment cost is different from its net equity of the subsidiary or investee company upon the initial investment, such difference is amortized over five years on a straight-line basis. When an investee issues new shares and the Company does not invest in the new shares in proportion to the Company's ownership percentage, the resulting change in the Company's ownership percentage in the net assets of the investee is recorded as a capital surplus and long-term equity investment in the accompanying non-consolidated balance sheets.

Unrealized profits or losses from transactions between the Company and its investees and subsidiaries accounted for by equity method are reported as deferred intercompany profits or losses. If the deferred intercompany profits or losses relate to the depreciation or amortization of assets, the intercompany profit or loss is recognized over the estimated useful lives of the respective asset. All other deferred intercompany profits or losses are recognized in the period of realization.

If an investee's equity becomes negative and the Company has guaranteed the payments of the investee's debt or has provided other financial commitments to the investee, or if the investee's loss temporary in nature, then the investment loss is continuously recognized using the equity method. The resulting excess of the investment loss recognized over the related long-term equity investment is accounted for as long-term equity investment credits and is recorded as liabilities in the accompanying non-consolidated balance sheets.

(h) Property, plant and equipment

Property, plant and equipment are stated at cost. Interest costs related to the construction of plants and buildings are capitalized. Depreciation of property, plant and equipment is provided over the estimated useful lives of the respective assets using the straight-line method. Gains or losses on the disposal of property, plant and equipment are presented as non-operating income or expenses in the accompanying non-consolidated statements of income. Such gains, net-of related income taxes, are transferred from unappropriated earnings to capital surplus in the year before December 31, 2000 that the gains are realized in accordance with the ROC Company Law.

(i) Deferred charges

Deferred expenses primarily include bond issuance costs, software and royalty and are recorded at cost. These costs are amortized using the straight-line method over their estimated useful lives.

(j) Retirement plan

In 1984, the Company established a retirement plan. This plan provides for lump-sum retirement benefits to retiring employees, based on length of service, age and certain other factors. The Company deposits monthly retirement funds equal to 5.1% of employees' total salaries with the Central Trust of China in accordance with the Labor Standards Law. The company is suspending the providing of monthly retirement funds to the Central Trust of china from May 2001 to April 2002.

The Company accounts for this plan in accordance with ROC Statement of Financial Accounting Standard ("SFAS") No. 18 "Accounting for Pensions." SFAS No. 18 requires the Company to recognize a minimum pension liability as of the balance sheet date equal to the amount by which the actuarial present value of the accumulated benefit obligation exceeds the fair value of the retirement plan's assets. SFAS No. 18 also requires the Company to recognize net periodic

pension costs based on actuarially determined amounts over the service lives of the retirement plan participants.

(k) Income taxes

The Company accounts for income taxes in accordance with ROC SFAS No. 22 “Accounting for Income Tax.” Under the asset and liability approach of SFAS No. 22, deferred income tax liabilities are recognized for tax consequences of taxable temporary differences by applying enacted statutory tax rates. Deferred income tax assets are recognized for tax consequences of deductible temporary differences, operating loss carryforwards, and investment tax credits. A valuation allowance is provided if it is considered more likely than not that the deferred income tax assets will not be realized.

Deferred income tax assets and liabilities are classified as current and non-current in the accompanying non-consolidated balance sheets in accordance with the classification of the related asset and liability which created the temporary difference. If the deferred income tax asset or liability is not related to a specific asset or liability, then the deferred income tax balance is classified based on the period of expected realization.

(l) Net income per share of common stock

Net income per common share is based on net income divided by the weighed-average number of common shares outstanding. The increase in the number of outstanding shares through distribution of stock dividends from retained earnings or capital surplus is included in the outstanding shares retroactively. Convertible bonds are included in the computation of net income per common share if they are common stock equivalents and have a diluting effect on net income per common share of more than 3%.

(m) Financial derivative instruments

Foreign currency exchange contracts intended to hedge foreign currency receivables and payables are translated into New Taiwan dollars at the exchange rates prevailing on the balance sheet date. The resulting translation differences are recorded as current year income or expense in the accompanying non-consolidated statements of income. The differences between the forward rate and spot rate at the contract date is amortized over the contract period.

(n) Treasury stock

The Company accounts for the cost of purchasing its outstanding stock as “treasury stock” and includes the treasury stock as a component of stockholders’ equity in the accompanying non-consolidated balance sheets. Upon disposal of the treasury stock, the excess of the sale proceeds over the cost is accounted for as capital surplus - treasury stock. If the sale proceeds are less than cost, the deficiency is accounted for as a reduction of the remaining balance of capital surplus - treasury stock. If the remaining balance of capital surplus - treasury stock is insufficient to cover the deficiency, the remainder is recorded as a reduction of retained earnings. The cost of treasury stock is computed using the weighted-average method.

If treasury stock is retired, the weighted-average cost of the retired treasury stock is written off to offset the par value and the premium, if any, of the stock retired. If the weighted-average cost written off exceeds the sum of both the par value and the capital surplus premium, the difference is accounted for as a reduction of capital surplus - treasury stock, or a reduction of retained earnings for any deficiency where capital surplus - treasury stock is insufficient to cover the difference. If the weighted-average cost written off is less than the sum of both the par value and premium, if any, of the stock retired, the difference is accounted for as an increase in capital surplus - treasury stock.

(e) Legal reserve and restrictions on unappropriated earnings

- Legal reserve

ROC Company Law stipulates that the Company must retain 10% of its annual earnings until such retention equals the amount of issued common stock. This amount is accounted for by transfers to a legal reserve upon approval by the Company's stockholders. The legal reserve can be used to offset an accumulated deficit. Also, 50% of the legal reserve can be converted to common stock if the legal reserve reaches an amount equal to one-half of issued common stock upon approval by the Company's stockholders.

- Dividends and employee bonuses

The Company's articles of incorporation stipulate that the balance of annual income after deducting accumulated deficit, if any, must be set up as a legal reserve equal to 10% of such balance and used to declare dividends of up to NT\$1 per share. The remaining balance, if any, can be distributed as follows:

- a. 5%-10% as employee bonuses.
- b. 1% as bonuses for directors and supervisors; and
- c. the remainder as dividends and bonuses for stockholders.

The distributable percentage can be adjusted after approval by the Company's stockholders.

(12) Income Taxes

(a) The Company is subject to ROC income tax at a maximum rate of 25%. The income tax expense (benefit) in 1999, 2000 and 2001 are summarized as follows:

- (d) According to the ROC Statute for Upgrading Industry, the Company’s investment in certain high-tech industries, automatic machinery and equipment, research and development expenses and personnel training can be used to credit one-half of the current year’s income tax liabilities. The unused income tax credit can be carried forward for the following four years. As of December 31, 2001, total unused income tax credits amounted to NT\$1,200,145.
- (e) The Company’s directors and supervisors held a meeting on March 5, 1997, and resolved that the Company’s overseas subsidiaries’ retained earnings will not be appropriated and shall be maintained as a permanent investment. As a result, the difference between the costs of long-term equity investment in overseas subsidiaries and its taxable basis was not recognized as a deferred tax liability.
- (f) Undistributed earnings, imputation credit account (“ICA”) and creditable ratio

Beginning in 1998, the integrated income tax system was implemented. Under this system, any undistributed profits earned subsequent to December 31, 1997, are subject to an additional 10% income surtax.

Under the new tax system, the income tax paid at the corporate level can be used to offset ROC resident stockholders’ individual income taxes. The Company is required to establish an ICA to

maintain a record of the corporate income tax paid and imputation credit they have allocated to each stockholder. The credit available to the ROC resident stockholders is calculated by multiplying the dividend by creditable ratio. The creditable ratio is calculated by dividing the balance of ICA by retained earnings since January 1, 1998.

The non-resident stockholders are not eligible for the imputation credit. However, the 10% income surtax paid at the corporate level can be used to offset dividend tax withheld from non-resident stockholders upon distribution of earnings.

As of December 31, 1999, 2000 and 2001, the information related to the integrated tax system for the Company was as follows:

| | <u>1999</u> NT\$ | <u>2000</u> NT\$ | <u>2001</u> | |

As of December 31, 1999, 2000 and 2001, total vested benefits were NT\$2,631 and NT\$16,087, respectively. There were no vested benefits as of December 31, 2000. Total pension expense was NT\$18,495, NT\$11,416 and NT\$23,288 in 1999, 2000 and 2001, respectively.

(14) Fair Value of Financial Instruments

The carrying amounts of cash and cash equivalents, notes and accounts receivable, receivables from related parties, notes and accounts payable, payables to related parties, and short-term borrowings, approximate fair value because of the short-term maturity of these instruments.

The fair value and carrying amounts of all other financial instruments as of December 31, 2001 are summarized as follows:

| | December 31, 2001 | | | |
|--|--------------------------|-------------|-------------------|-------------|
| | Carrying amount | | Fair value | |
| | NT\$ | US\$ | NT\$ | US\$ |
| Non-derivative financial instruments: | | | | |
| Assets: | | | | |
| Short-term investments | 3,469,826 | 99,138 | 5,721,602 | 163,474 |
| Long-term equity investments in which the: | | | | |
| - Fair value could not be determined | 9,795,061 | 279,859 | 20,676,041 | 590,744 |
| - Fair value could not be determined | 12,687,391 | 362,497 | - | - |
| - Other long-term investment | 5,167 | 148 | 4,890 | 140 |
| Liabilities: | | | | |
| Long-term debt | 640,190 | 18,291 | 640,190 | 18,291 |
| Bonds payable | 8,595,927 | 245,598 | 9,106,794 | 260,194 |
| Derivative financial instruments: | | | | |
| Foreign currency exchange contracts | 51,954 | 1,484 | 722,262 | 2,065 |

The following methods and assumptions are used to estimate the fair value of each class of the above financial instruments:

(a) Short-term investments

The fair value of short-term investments is based on the quoted market price of similar securities. If quoted prices are not available, then the market value is estimated using other financial information.

(b) Long-term equity investments

The fair value of long-term equity investments is based on quoted market prices for these securities. If those securities are not listed on a public market, the fair value is not considered estimable.

(c) Other long-term investment

The fair value of other long-term investment is based on quoted market prices.

(d) Long-term debt

The majority of the Company's long-term debt is variable interest debt in which the carrying value approximates the market value.

(e) Bonds payable

The fair value of bonds payable is estimated base on quoted market prices.

(f) Fair value of derivative financial instruments

The fair value of foreign currency exchange contracts are estimated by obtaining quotes from brokers.

(15) Derivative Financial Instruments

The Company uses financial instruments to offset exposure to market risks arising from changes in foreign exchange rates and interest rates. Derivative financial instruments utilized by the Company primarily included foreign currency exchange contracts.

As of December 31, 1999, 2000 and 2001, the contract amounts for the Company's outstanding derivative financial instruments were as follows:

| | <u>1999</u> | <u>2000</u> | <u>2001</u> | |
|-------------------------------------|-----------------|-----------------|-----------------|-----------------|
| | <u>Contract</u> | <u>Contract</u> | <u>Contract</u> | <u>Contract</u> |
| | <u>amount</u> | <u>amount</u> | <u>amount</u> | <u>amount</u> |
| | <u>NT\$</u> | <u>NT\$</u> | <u>NT\$</u> | <u>US\$</u> |
| Foreign currency exchange contracts | 5,212,187 | - | 4,661,217 | 133,178 |

Management believes that these derivatives do not have any credit risk. The contract amounts for the derivatives summarized above are used to calculate amounts exchanged in future periods relating to foreign currency exchange rates. The Company is exposed to credit related losses equal to the market value of the financial instruments shown above, which reflects the loss on September 30th that would result from replacing the instruments in case of non-performance by the counterparties. The Company does not anticipate that any of its counterparties will fail to meet their obligations because of their high credit ratings. Where appropriate, the Company has diversified its selection of counterparties.

Since the foreign currency exchange contracts are entered to hedge the existing foreign currency assets and liabilities, and the exchange rate of the forward contracts are fixed, management believes that the liquidity and cash flow risk is minimal.

The related net asset balance related to these contracts is classified as "prepaid expenses and other current assets" in the accompanying non-consolidated balance sheets. As of December 31, 1999, 2000 and 2001, the net receivables were NT\$31,882 and NT\$51,954, respectively.

Financial Statements
December 31, 1999, 2000 and 2001
(With Auditors' Report Thereon)

Independent Auditors' Report

The Board of Directors
BenQ Corporation:

We have audited the consolidated balance sheets of BenQ Corporation and subsidiaries as of December 31, 1999, 2000 and 2001, and the related consolidated statements of income, changes in stockholders' equity, and cash flows for the years then ended. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the Republic of China. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of BenQ Corporation and subsidiaries as of December 31, 1999, 2000 and 2001, and the consolidated results of their operations and their cash flows for the years then ended, in conformity with accounting principles generally accepted in the Republic of China.

The accompanying consolidated financial statements as of and for the year ended December 31, 2001, have been translated into United States dollars solely for the convenience of the readers. We have audited the translation, and in our opinion, the consolidated financial statements expressed in New Taiwan dollars have been translated into United States dollars on the basis set forth in note 3(c) of the notes to the consolidated financial statements.

Taipei, Taiwan (the Republic of China)
March 6, 2002

The accompanying consolidated financial statements are intended only to present the financial position, results of operations and cash flows in accordance with accounting principles and practices generally accepted in the Republic of China and not those of any other jurisdictions. The standards, procedures and practices to audit such consolidated financial statements are those generally accepted and applied in the Republic of China.
